 PALE YELLOW

**ROSES 6 Easy Planting Steps**

**WHAT YOU NEED TO PLANT:**

**Soil Amendment-** Organic Soil Building Conditioner (mix 30% SBC to 70% native soil)

**Root Starter-** Fertilome Root Stimulator

**Plant Spacing:** Rose: 3FT apart Climber: 4-5FT apart Mini: 2FT apart

1. Deeply water the pulp pot and let it drain before planting. (This helps keep root ball intact.)
2. Dig your planting hole. (2x the width of the root ball & the same depth of rose in the pulp or plastic pot.)
3. Place the potted rose in the hole to get proper depth. The graft/knob area on the rose stem should be above soil. (David Austin roses do not have a graft.)
4. Cut the bottom off the pulp pot. Make three to four vertical cuts into the sides and remove them. (David Austin rose- gently remove plant & root ball)
5. Backfill with amended soil (30% SBC to existing soil) as you remove the sides of the pot.
6. Lastly, fill in the rest of the planting hole and gently press the soil down. Water thoroughly and add Root Stimulator. You can compost the pulp pot.
